

# Behavioral health cannot be managed in a silo.

NeuroFlow enables behavioral health integration across care management for better outcomes, lower costs, and improved care manager efficiency.

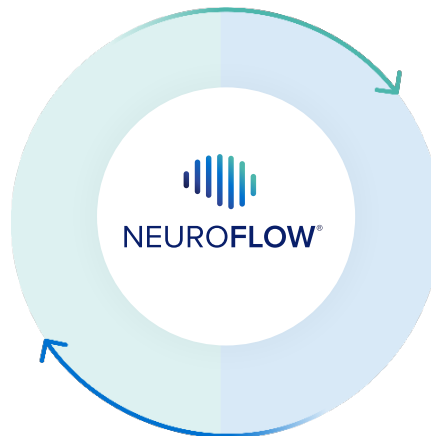

## Match members to the right level of care, at the right time

Unaddressed behavioral health in older populations is a major cost driver that few have figured out how to manage effectively. NeuroFlow's tech infrastructure for behavioral health supports members across risk levels and empowers care managers with the critical insights they've been lacking.

### Screenings, Digital Support and Crisis Intervention for All Members

- Population-wide screening
- Individually tailored content and dCBT
- Support for Social Determinants of Health
- Suicide prevention
- Connection to appropriate resources
- Rewards for engagement

### Behavioral Health Insights Delivered to Your Care Teams

- Risk stratification to prioritize outreach and resources
- Alerts for at-risk members
- Clinical decision-making support
- Member and population-level reporting
- Integration with existing care management software

### NeuroFlow Helps Your Organization to:

- ✓ Reduce total cost of care and prevent unnecessary utilization
- ✓ Identify and support rising-risk members before conditions escalate
- ✓ Reduce readmissions through real time monitoring and proactive outreach
- ✓ Close HEDIS gaps through screenings and medication reminders
- ✓ Improve member satisfaction scores

NeuroFlow helped to identify mental health conditions in **19%** of members previously treated only for their physical condition.

**55%** of Medicare members in programs using NeuroFlow that have depression experience clinically significant improvement in 4-8 months

**20 activities per month** completed on average by NeuroFlow users over the age of 65
